PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 3.5+ years of experience building scalable, high-performance applications using C#, .NET 8, ASP.NET Core, SQL Server, and Azure. Experienced in architecting multi-tenant SaaS platforms, developing financial calculation engines, and designing robust backend systems across 8+ projects. Specialized in SQL performance optimization, reducing complex reporting queries to 3–4 seconds, and building serverless RAG pipelines processing 500+ pages using Azure Durable Functions. Strong expertise in backend architecture, dependency injection, repository patterns, policy-based authorization, and automated testing with xUnit and Moq.

WORK EXPERIENCE

Software Developer, Prioxis Technologies **Aug 2022 - Dec 2025**

- Architected and scaffolded foundational ASP.NET Core and C# backend solutions across 8+ projects, establishing dependency injection scoping, Entity Framework Core repositories, Unit of Work patterns, and scalable RESTful APIs.
- Engineered the core financial calculation engine for an enterprise platform, implementing time-based rate rules, hierarchical revenue splits, policy clawback deductions, and rolling indemnity reserve release schedules.
- Optimized high-load SQL Server stored procedures and multi-million-row reporting pipelines using SSMS execution plans, CTEs, and non-clustered indexing, reducing query response times from several minutes or timeouts down to a consistent 3-4 seconds.
- Designed a multi-tenant SaaS architecture on Azure enforcing data isolation via JWT claims and 40+ authorization policies, validated under 400 concurrent requests across a 400-tenant staging benchmark (~1M records) via JMeter.
- Built a dedicated analytics microservice querying operational databases under strict read-only isolation, using dynamic T-SQL PIVOT procedures with native FOR JSON PATH serialization executing in ~2 seconds.
- Built an asynchronous RAG document intelligence pipeline using Python, Azure Durable Functions, and Azure AI Search, developing a PDF segmentation algorithm to process 500+ page documents past OCR limits, with citation verification.
- Implemented JWT authentication with Google and Apple SSO integrations for a client-facing platform, alongside SendGrid transactional email workflows and 3-locale JSON localization.
- Integrated Stripe Checkout and idempotent webhook lifecycle listeners with cryptographic signature validation to automate tenant onboarding, database schema provisioning, and real-time subscription synchronization.
- Investigated and resolved production incidents across Azure App Services and Azure SQL using Application Insights and Serilog, diagnosing memory spikes, connection pool starvation, and implementing retry policies.
- Developed an internal HR and attendance platform, rebuilding the check-in/check-out system with leave/WFH approval workflows and mobile-accessible check-in APIs.
- Integrated third-party financial and CMS APIs (Stripe, Xero) to automate financial workflows and data synchronization between internal and external systems.
- Implemented automated CI/CD build and release pipelines in Azure DevOps, and mentored developers on clean code, testing practices, and architectural standards.
- Led migration of client web platforms from client-side React SPAs to Next.js SSR/SSG, resolving search indexability issues and achieving 96-98 Google Lighthouse performance scores.
- Developed custom SEO-focused CMS extensions across Umbraco, Kentico, and Optimizely using .NET Framework and .NET Standard, packaging modules into reusable NuGet libraries for cross-team distribution.

SKILLS

- **Programming Languages:** C#, SQL (T-SQL, PostgreSQL), TypeScript, JavaScript, Python
- **Backend & APIs:** .NET 8, ASP.NET Core Web API, ASP.NET MVC, RESTful APIs
- **Data Access & ORM:** Entity Framework Core 8, Dapper, LINQ, Generic Repository, Unit of Work
- **Databases:** SQL Server, Azure SQL, PostgreSQL, SQLite, Query Optimization, CTEs, Window Functions
- **Architecture:** N-Tier Architecture, Dependency Injection Scoping, CQRS-lite, Multi-Tenancy
- **Cloud & Serverless:** Azure App Service, Azure Functions, Durable Functions, Blob Storage, App Insights
- **Applied AI:** Azure OpenAI (GPT-4o), Claude API, Voyage AI, Azure AI Search, Document Intelligence (OCR)
- **DevOps & CI/CD:** Azure DevOps, CI/CD Pipelines, Git, GitHub Workflows, Automated Packaging
- **Security & Integrations:** JWT, Policy-Based Authorization, OAuth2, Stripe API, SendGrid API
- **Testing & Frontend:** React.js, Next.js, TypeScript, Tailwind CSS, xUnit, Moq, JMeter

PROJECTS

Cashbook — Cross-Platform Desktop Financial Manager

- Tech Stack: ASP.NET Core, C#, React, TypeScript, Electron, SQLite, Entity Framework Core, Zustand, Tailwind CSS
- Architected and built a cross-platform desktop finance management application using Electron, React, and ASP.NET Core, establishing a modular backend architecture for offline financial record management.
- Designed and developed RESTful Web APIs for account management, transaction ledger operations, financial reporting, database backup and restore, and data export workflows.
- Engineered dynamic search and filtering supporting multi-column sorting, date range filters, and full-text search across transaction data.
- Designed a relational SQLite database schema using Entity Framework Core with migrations, audit fields, and optimized query handling.
- Built Excel and CSV export functionality with flexible grouping options to support financial reporting and data analysis.
- Implemented desktop packaging, auto-update flows, and cross-platform build pipelines for Windows and macOS using Electron build tooling.

EDUCATION

Bachelor of Engineering in Information Technology **July 2018 – June 2022**

A. D Patel Institute of Technology, Karamsad

- CGPA: 8.59 / 10
